

Question 1	Response 1	Question 2	Response 2
Are the 4th-grade and 5th-grade tests different in difficulty or length?	<p>Length will be roughly the same - all tests will be very long and students are not expected to finish.</p> <p>5th grade will be slightly more challenging (maybe fewer hints) but generally comparable.</p> <p>4th and 5th grade tests will be different</p>	<p>Will the questions specify what cipher they are encoded with? I guess many are obvious, just curious if each question will be clearly labeled or not.</p>	Yes
Can you say about how many of each cipher type to expect on the test?	no	Can you give any ideas on the points values for questions? Are they like 100-300? 100-500? 100-1000?	40-300 on last year's test; this year could differ slightly
Tie breakers - scenarios 3: if team B attempted only 1 letter (correct) and team A didn't attempt anything. Would team B win?	yes		
What range of score do you assign for each type of cipher. Aristo is around 250 and others?	Range will depend on difficulty	How many questions were in last years test for 5th grade? Would it be 15+?	The intention is that students will not finish
How different will the 4th grader to 5th grader test be? More questions / complicated questions?	<p>Length will be roughly the same - all tests will be very long and students are not expected to finish.</p> <p>5th grade will be slightly more challenging (maybe fewer hints) but generally comparable.</p> <p>4th and 5th grade tests will be different</p>		
The regional tests from other regions have about 16 questions. How many questions should we be targeting to get through during practice sessions	Slowly ramp up the number of questions in practice. Dependent on cipher and kids. More ciphers can be created and can be taken home for practice	How would you suggest we separate out words with tap code or vigenere. Would a hyphen to separate words be adequate	Slash or gap is good. Please be legible.
Would it be single side print or back to back	Single-sided
